Summary

Full-Stack Software Engineer with 3+ years designing, shipping, and operating production systems end to end — REST APIs, relational schemas, and containerized services in Node.js, Express.js, and TypeScript on MySQL, Redis, Docker, and AWS, together with the React, Next.js, and React Native clients that consume them. Owns delivery from schema and API design through CI/CD, deployment, and production monitoring, and has led platform-wide technical migrations adopted across three client applications. Extends into Golang (Gin), Python, PostgreSQL, pgvector, and RAG pipelines through self-built distributed and real-time systems.

Key Achievements

- **Cut average API response time 35%** across 40+ production endpoints through SQL query and index optimization and a Redis caching layer.
- **Delivered payment infrastructure across 3 gateways** — Stripe, PayPal, and Razorpay — for an eCommerce platform processing 2,000+ transactions per month.
- **Led a platform-wide TypeScript migration** and set the shared API-contract standard adopted by 3 client applications; cut frontend build times 60%+ and lifted Lighthouse 62 to 89.

Technical Skills

Languages: TypeScript, JavaScript, Python, Golang, SQL

Cloud & DevOps: AWS (EC2, S3, IAM, CloudWatch), Docker, Docker Compose, GitHub Actions (CI/CD), Nginx (reverse proxy, load balancing, SSL/TLS), PM2, Linux/VPS Administration, Shell Scripting, Zero-Downtime Deployments, Observability & Alerting

Backend & APIs: Node.js, Express.js, FastAPI, Gin, REST API Design, WebSockets, Authentication & Authorization (JWT, OAuth, RBAC), Middleware Architecture, Webhooks (Stripe, PayPal, Razorpay), Background Jobs, API Versioning, Rate Limiting, Redis Pub/Sub

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQLite, pgvector, Sequelize ORM, GORM, Schema Design, Indexing, Query Optimization, Transactions, Migrations

Architecture & System Design: Clean Architecture, Repository & Service-Layer Patterns, Dependency Injection, Modular Monolith, Caching Strategies, Event-Driven & Real-Time Systems, Distributed Systems, Horizontal Scaling, Idempotency & Fault Tolerance, Concurrency

Frontend & Mobile: React, Next.js (App Router, Server Components), React Native, Redux Toolkit, Zustand, TanStack Query, Tailwind CSS, Vite, Web Performance Optimization

AI / Data Backend: Python Data-Ingestion Pipelines, RAG, Embeddings, Semantic Search (PostgreSQL + pgvector, HNSW), LLM APIs (Gemini, Groq, Ollama), LangChain, Streaming Responses, Tool / Function Calling

Testing & Quality: Jest, Vitest, Playwright, Postman, Unit & Integration Testing, End-to-End Testing, API Testing, Structured Logging, Sentry, Debugging & Profiling

Leadership & Practices: Technical Ownership, Architecture & Design Decisions, Code Review, Cross-Functional Collaboration, Technical Documentation, Knowledge Sharing, Agile/Scrum, Git/GitHub

Professional Experience

Infinite Open Source Solution LLP — Software Engineer, Bangalore, India **Nov 2023 – Present**

Node.js • Express.js • TypeScript • MySQL • Sequelize ORM • Redis • REST APIs • Docker • AWS • Nginx • Linux/VPS • React • React Native

- **Designed and shipped 40+ production REST endpoints** with Express.js, Sequelize ORM, and TypeScript — middleware validation, JWT authorization, and SQL query and index optimization.
- **Owned the platform's MySQL data layer** — normalized schema design, foreign-key constraints, indexed access paths, and versioned migrations released to production with zero downtime.
- **Owned production infrastructure on AWS (EC2, S3, IAM, CloudWatch) and Linux/VPS** — Docker-containerized services behind Nginx and PM2, GitHub Actions CI/CD, structured logging, and monitoring.

- **Architected payment infrastructure across Stripe, PayPal, and Razorpay** for an eCommerce platform — webhook-driven order lifecycles, signature verification, and idempotent retries.
- **Cut database load under peak traffic with a Redis caching layer** over read-heavy endpoints and session storage.
- **Designed the sync backend for an offline-first geolocation tracking system** — batched uploads, idempotent writes, and retry-based recovery that survives prolonged network outages.
- **Led the platform-wide migration from JavaScript to TypeScript** and set the shared API-contract and component library standard for the React, Next.js, and React Native clients.
- **Drove the React build migration from Create React App to Vite**; code-splitting and CDN asset delivery lifted Lighthouse 62 to 89 and page load 3.8s to 2.1s.
- **Shipped and maintained React Native apps on Google Play and the Apple App Store**, with background location capture and local buffering for offline use.

Systems & Cloud Projects

Self-built production-grade systems — architecture, backend, infrastructure, and client. Source: github.com/MohdRinshadmi.

Cloud-Native IoT Analytics Platform

github.com/MohdRinshadmi/cloud-native-iot-dashboard

Golang • Gin • GORM • PostgreSQL • Redis • Docker Compose • REST APIs • React • TypeScript

- **Architected a Golang backend on Clean Architecture** — repository and service-layer separation with dependency injection, in a monorepo splitting backend, frontend, and infrastructure.
- **Built REST APIs and device-management services** ingesting high-frequency telemetry with Gin, GORM, PostgreSQL, and Redis over indexed time-series tables.
- **Containerized backend, database, and broker with Docker Compose**; built the React dashboard on TanStack Query and Zustand with type-safe API clients.

AI Life Assistant Super App

github.com/MohdRinshadmi/ai-life-assistant

Node.js • TypeScript • Python • PostgreSQL + pgvector • Redis • Gemini API • Next.js (App Router) • React

- **Architected the Node.js API layer for a voice-first AI assistant** — streaming LLM responses, speech-to-text and TTS orchestration, and server-side tool/function calling.
- **Built Python data-ingestion pipelines and pgvector retrieval** — chunking, embedding generation, and HNSW-indexed semantic search over thousands of documents.
- **Secured the API with JWT refresh-token rotation and Redis rate limiting**; built the Next.js App Router client on the streaming endpoints.

Real-Time Collaboration Platform

github.com/MohdRinshadmi/ai-real-time-collaboration

Node.js • TypeScript • WebSockets • Redis Pub/Sub • Yjs (CRDT) • PostgreSQL + pgvector • Docker • React • Next.js

- **Architected a stateless WebSocket fan-out server** with channel-based routing and Redis Pub/Sub, scaling horizontally without sticky sessions.
- **Implemented CRDT document sync with Yjs** for conflict-free convergence, plus presence signals and streaming LLM summarization gated by JWT/OAuth.
- **Wrote end-to-end Playwright tests** covering multi-user editing, reconnection, and conflict resolution.

Education

Bachelor of Business Administration (BBA)

June 2019 – Oct 2022

SJES College of Management — Bangalore North University, Bangalore
