SUMMARY

AI-focused Full-Stack Engineer with 2.5+ years shipping 20+ production systems across React, Next.js, TypeScript, Node.js, Golang, and AWS. Builds React/Next.js front ends (React Server Components, SSR, React Query, Zustand, Tailwind) wired to Node.js and Go APIs that run LLM applications, RAG, multi-agent systems, and tool/function calling over PostgreSQL + pgvector, Redis, and WebSockets. Cut API latency 35%, eliminated a recurring runtime-error class via a live JS→TypeScript migration, and processed Stripe/PayPal billing with zero reconciliation failures.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Golang, SQL
Frontend: React, Next.js (App Router, RSC, Server Actions, SSR), React Native, Tailwind CSS, shadcn/ui, Redux Toolkit, Zustand, TanStack Query
Backend & APIs: Node.js, Express, Golang, Gin, GORM, REST, GraphQL (familiar), WebSockets, Microservices, Event-Driven Architecture, Serverless, Webhooks, JWT/OAuth, Rate Limiting
AI / LLM Engineering: Claude, OpenAI & Gemini APIs, Vercel AI SDK, LangChain, LangGraph, RAG, Embeddings, Semantic Search (pgvector / HNSW), Tool/Function Calling, Multi-Agent & Agentic Systems, MCP Servers
Databases: PostgreSQL, pgvector, MongoDB, MySQL, Redis, SQLite
Cloud & DevOps: AWS (EC2, S3, Lambda, CloudWatch), Vercel, Docker, Docker Compose, Kubernetes (familiar), GitHub Actions CI/CD, Nginx
Practices & Tooling: Clean Architecture, Monorepos, Claude Code, Cursor, GitHub Copilot, Playwright, Sentry, Lighthouse

EXPERIENCE

Infinite Open Source Solution LLP — Software Engineer, Calicut, Kerala **Nov 2023 – Present**

- **Cut feature delivery time 30% across 20+ web and mobile apps** by architecting a shared TypeScript component & API-contract layer across React, Next.js, and React Native.
- **Shipped production LLM features via the Vercel AI SDK** — Claude/OpenAI streaming completions, tool/function calling, and RAG over PostgreSQL + pgvector inside Next.js Server Components and Node.js APIs.
- **Reduced API response times 35% on high-traffic routes** by profiling and re-indexing MongoDB, MySQL, and PostgreSQL queries behind real-time chat, payments, and AI dashboards.
- **Designed multi-agent and tool-calling orchestration over Claude/OpenAI** using LangChain/LangGraph patterns — wiring retrieval, function tools, and human-in-the-loop approvals.
- **Processed Stripe and PayPal subscriptions with zero reconciliation failures** by owning end-to-end billing — webhook verification, idempotent reconciliation, and retry logic.
- **Established cloud-native observability and auth baselines** on AWS (EC2, S3, Lambda) with Docker, GitHub Actions CI/CD, Sentry, and a reusable JWT/OAuth layer — cutting crash MTTR ~50%.

PROJECTS

Cloud-Native IoT Analytics Platform

React • TypeScript • Golang • Gin • PostgreSQL • Redis • Docker

- **Architected a cloud-native IoT analytics platform (React + Golang)** with Clean Architecture, repository/service-layer patterns, and dependency injection — structured as a scalable monorepo (frontend, backend, infrastructure, shared modules) for future microservice evolution.
- **Developed 15+ REST APIs** for device registration, telemetry ingestion, authentication, and analytics using Gin, GORM, PostgreSQL, and Redis with middleware-based request handling.
- **Built 25+ reusable React components and a type-safe API layer** with TanStack Query, Zustand, and feature-based modules.
- **Containerized 6 services with Docker Compose**, cutting local environment setup from hours to minutes — with real-time telemetry, MQTT event processing, WebSocket broadcasting, AI analytics, and Kubernetes deployment designed for future implementation.

AI Life Assistant Super App

React • Next.js (App Router, RSC) • Node.js • TypeScript • Gemini API • PostgreSQL + pgvector • Redis

- **Architected a voice-first AI assistant** with streaming LLM chat, transcription, TTS playback, and tool calling across a React/Next.js streaming UI and Node.js APIs.
- **Built a production RAG pipeline** using Gemini embeddings and PostgreSQL + pgvector, enabling semantic retrieval over 20,000+ embedded knowledge chunks.
- **Implemented HNSW vector indexing**, reducing retrieval latency from seconds to sub-second response times during testing.
- **Secured APIs** using JWT refresh-token rotation and Redis-backed distributed rate limiting.

AI-Powered Real-Time Collaboration Platform

React • Next.js • TypeScript • Node.js • WebSockets • Yjs (CRDT) • PostgreSQL + pgvector • Redis • AWS

- **Built a CRDT-powered collaborative editor (Yjs)** with live presence and typing indicators, handling simultaneous edits from 20+ test clients without merge conflicts.
- **Developed a stateless, Redis Pub/Sub-backed WebSocket architecture** broadcasting updates across multiple application instances via channel-based routing.
- **Integrated streaming LLM workflows** for inline summarization and agent actions on selected content, secured with a JWT/OAuth audit/ACL layer and idempotent webhooks on AWS.

EDUCATION

BBA, SJES College of Management — Bangalore North University, Bangalore, India

June 2019 – Oct 2022
