

Mohammed Rinshad M I

Full-Stack Software Engineer | React, Next.js, Node.js, Golang | AI/LLM & Real-Time Systems

Email: rinshad803@gmail.com | Phone: +91 88486 75355

Location: Palakkad, Kerala, India

LinkedIn: linkedin.com/in/mohd-rinshadmi | GitHub: github.com/MohdRinshadmi

Summary

Full-Stack Software Engineer with 3+ years of experience building and scaling production web and mobile applications using React, Next.js, React Native, Node.js, Express, Golang, MySQL, PostgreSQL, Redis, and AWS.

Shipped eCommerce, LMS, and AI-powered products end-to-end, including Stripe, PayPal, and Razorpay payment integrations, RAG-powered semantic search, and real-time collaboration features. Reduced API response times by 35%, raised Lighthouse performance from 62 to 89, and owned Docker, CI/CD, and Linux/VPS deployments for reliable, monitored releases.

Technical Skills

Languages: TypeScript, JavaScript, Python, Golang, SQL

Computer Science: Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, Database Management Systems (DBMS), Computer Networks (CN)

Frontend: React, Next.js (App Router, Server Components), React Native, Redux Toolkit, Zustand, TanStack Query, Tailwind CSS, Vite

Backend & APIs: Node.js, Express, Gin, Sequelize ORM, GORM, REST APIs, WebSockets, Redis Pub/Sub, JWT/OAuth

Payments: Stripe, PayPal, Razorpay (webhook-driven order lifecycle)

Databases: PostgreSQL, pgvector (HNSW), MongoDB, MySQL, Redis

AI / LLM: Gemini & Groq, Ollama (local LLMs), LangChain, Vercel AI SDK, RAG, Embeddings, Semantic Search, Streaming, Tool / Function Calling

Architecture: Clean Architecture, Repository & Service-Layer Patterns, Dependency Injection, Monorepo, CRDT (Yjs), Real-Time Systems

Cloud & DevOps: AWS (EC2, S3, IAM, CloudWatch), Docker, Docker Compose, GitHub Actions (CI/CD), Nginx, PM2, Linux/VPS

Tools: Git, Playwright, Vitest, Jest, Sentry, Lighthouse

Experience

Infinite Open Source Solution LLP — Software Engineer, Calicut, Kerala **Nov 2023 – Present**

React.js • Node.js • Express.js • MySQL • Sequelize • Redis • Docker • Linux • REST APIs

- **Migrated the entire codebase from JavaScript to TypeScript** across both web (React) and mobile (React Native) apps, adding full type safety that caught bugs early and made the code easier to maintain.
- **Built a shared TypeScript component and API-contract library** used across React, Next.js, and React Native projects, reducing duplicated code and speeding up feature delivery.
- **Integrated Stripe, PayPal, and Razorpay payment gateways** with webhook-driven order lifecycle management for a production eCommerce platform processing 2,000+ monthly transactions.
- **Architected 40+ RESTful API endpoints** using Express.js and Sequelize ORM with middleware-based input validation, JWT authentication, structured error handling, and SQL query optimization — reducing average API response time by 35%.
- **Led frontend migration from Create React App to Vite**, cutting build times from ~90s to ~35s (60%+ reduction) and accelerating developer iteration cycles across a 4-person frontend team.
- **Optimized React rendering, code-splitting, and CDN-based static asset delivery**, improving Lighthouse performance score from 62 to 89 and reducing initial page load time from 3.8s to 2.1s.
- **Deployed and published React Native mobile apps to the Google Play Store and Apple App Store**, managing release builds, signing, and store-review compliance, and monitored production releases with crash reporting and performance tracking.

- **Built an offline-first geolocation tracking system with React Native and SQLite** — background location capture, local buffering, and retry-based recovery for reliable workforce tracking through prolonged network outages.

Portfolio Projects

Self-initiated projects built to explore production patterns in AI, real-time systems, and cloud-native architecture — running on self-hosted, open-source infrastructure (PostgreSQL, Redis, Docker); no commercial users. Source: github.com/MohdRinshadmi.

Cloud-Native IoT Analytics Platform

github.com/MohdRinshadmi/cloud-native-iot-dashboard

React • TypeScript • Golang • Gin • GORM • PostgreSQL • Redis • Docker

- **Architected a cloud-native IoT analytics platform (React + Golang)** with Clean Architecture, repository/service-layer patterns, and dependency injection — structured as a scalable monorepo separating frontend, backend, infrastructure, and shared modules.
- **Developed RESTful APIs and device-management services** ingesting high-frequency telemetry using Gin, GORM, PostgreSQL, and Redis with structured configuration management and middleware-based request handling.
- **Built reusable frontend infrastructure** with TanStack Query, Zustand, feature-based modules, and type-safe API integrations, reducing UI boilerplate across new dashboards.
- **Containerized backend, database, broker, and supporting services** using Docker Compose, enabling one-command local deployment and consistent development environments.

AI Life Assistant Super App

github.com/MohdRinshadmi/ai-life-assistant

React • Next.js (App Router, RSC) • Node.js • TypeScript • Python • Gemini API • PostgreSQL + pgvector • Redis

- **Architected a voice-first AI assistant** with streaming LLM chat, speech-to-text transcription, TTS playback, and tool calling across a React/Next.js Server Components UI and Node.js APIs.
- **Indexed and retrieved knowledge from thousands of embedded documents** using PostgreSQL + pgvector and HNSW indexing, delivering sub-second semantic search relevance.
- **Built Python data-ingestion scripts** for chunking, embedding generation, and batch document indexing feeding the RAG pipeline.
- **Secured the API** with JWT refresh-token rotation and Redis-backed rate limiting.

AI-Powered Real-Time Collaboration Platform

github.com/MohdRinshadmi/ai-real-time-collaboration

React • Next.js • TypeScript • Node.js • WebSockets • Yjs (CRDT) • PostgreSQL + pgvector • Redis • Docker

- **Built a CRDT-based collaborative editor using Yjs** with real-time presence, typing indicators, and conflict-free synchronization across multiple concurrent clients.
- **Engineered a stateless WebSocket fan-out server** with channel-based routing and Redis pub/sub to sustain many concurrent editors.
- **Integrated streaming LLM features** for inline summarization and actions on selected text, with JWT/OAuth access control.
- **Wrote end-to-end Playwright tests** covering multi-user editing, reconnection, and conflict-resolution flows for release confidence.

Education

BBA, SJES College of Management — Bangalore North University, Bangalore June 2019 – Oct 2022
