

Mohammed Rinshad M I

Full-Stack Software Engineer | Node.js, TypeScript, Python | React, React Native, AWS, PostgreSQL | AI/LLM Integration

Email: rinshad803@gmail.com | Phone: +91 88486 75355

Location: Bangalore, India

LinkedIn: linkedin.com/in/mohd-rinshadmi | GitHub: github.com/MohdRinshadmi

Summary

Full-Stack Software Engineer with 3+ years building and running production REST APIs, relational schemas, and containerized services in Node.js, Express.js, and TypeScript on MySQL, Redis, Docker, and AWS. Backend-heavy, and hands-on with the clients those APIs serve: React, Next.js, and React Native. Additional backend work in Golang (Gin) and Python across self-directed projects on PostgreSQL, pgvector, and RAG pipelines.

Technical Skills

Languages: TypeScript, JavaScript, Python, Golang, SQL

Backend & APIs: Node.js, Express.js, FastAPI, Gin, REST API Design, WebSockets, JWT/OAuth, RBAC, Middleware Architecture, Webhooks, Background Jobs, API Versioning, Rate Limiting, Redis Pub/Sub

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQLite, pgvector, Sequelize ORM, GORM, Schema Design, Indexing, Query Optimization, Transactions, Migrations

Cloud & DevOps: AWS (EC2, S3, IAM, CloudWatch), Docker, Docker Compose, GitHub Actions (CI/CD), Nginx (reverse proxy, SSL), PM2, Linux/VPS Administration

Architecture & System Design: Clean Architecture, Repository & Service-Layer Patterns, Dependency Injection, Modular Monolith, Caching Strategies, Event-Driven & Real-Time Systems, Distributed Systems

Frontend & Mobile: React, Next.js (App Router, Server Components), React Native, Redux Toolkit, Zustand, TanStack Query, Tailwind CSS, Vite

AI / Data Backend: Python Data-Ingestion Pipelines, RAG, Embeddings, Semantic Search (PostgreSQL + pgvector, HNSW), LLM APIs (Gemini, Groq, Ollama), LangChain, Streaming Responses, Tool / Function Calling

Testing & Observability: Jest, Vitest, Playwright, Postman, Unit & Integration Testing, Structured Logging, Sentry, CloudWatch, Git/GitHub, Agile/Scrum

Experience

Infinite Open Source Solution LLP — Software Engineer, Bangalore, India **Nov 2023 – Present**

Node.js • Express.js • TypeScript • MySQL • Sequelize ORM • Redis • REST APIs • Docker • Nginx • Linux/VPS • React • React Native

- **Designed and built 40+ RESTful API endpoints** with Express.js and Sequelize ORM — middleware validation, JWT authentication, and SQL query and index optimization cut average API response time by 35%.
- **Designed relational schemas in MySQL** — normalized models, foreign-key constraints, indexed access paths, and versioned migrations shipped without downtime.
- **Integrated Stripe, PayPal, and Razorpay payments** — webhook-driven order lifecycles, signature verification, and safe retries for an eCommerce platform handling 2,000+ monthly transactions.
- **Added Redis caching** for read-heavy endpoints and session data, cutting repeated database round-trips under peak load.
- **Built the sync backend for an offline-first geolocation tracking system** — batched uploads, duplicate-safe writes, and retry-based recovery through prolonged network outages.
- **Containerized services with Docker and deployed to Linux/VPS and AWS** behind Nginx and PM2, with GitHub Actions CI/CD, structured logging, and production monitoring.
- **Migrated the codebase from JavaScript to TypeScript** and built a shared API-contract and component library for React, Next.js, and React Native clients.
- **Moved the React build from Create React App to Vite**, cutting build times 60%+ (~90s to ~35s); code-splitting and CDN assets lifted Lighthouse 62 to 89 and page load 3.8s to 2.1s.
- **Shipped React Native apps to the Google Play Store and Apple App Store**, with background location capture and local buffering for offline use.

Portfolio Projects

Self-initiated projects on self-hosted, open-source infrastructure (PostgreSQL, Redis, Docker); no commercial users.
Source: github.com/MohdRinshadmi.

Cloud-Native IoT Analytics Platform

github.com/MohdRinshadmi/cloud-native-iot-dashboard

Golang • Gin • GORM • PostgreSQL • Redis • Docker Compose • REST APIs • React • TypeScript

- **Built a Golang backend on Clean Architecture** — repository and service-layer separation with dependency injection, in a monorepo splitting backend, frontend, and infrastructure.
- **Developed REST APIs and device-management services** ingesting high-frequency telemetry with Gin, GORM, PostgreSQL, and Redis over indexed time-series tables.
- **Containerized backend, database, and broker with Docker Compose**; built the React dashboard on TanStack Query and Zustand with type-safe API clients.

AI Life Assistant Super App

github.com/MohdRinshadmi/ai-life-assistant

Node.js • TypeScript • Python • PostgreSQL + pgvector • Redis • Gemini API • Next.js (App Router) • React

- **Built the Node.js API layer for a voice-first AI assistant** — streaming LLM responses, speech-to-text and TTS orchestration, and server-side tool/function calling.
- **Built Python data-ingestion pipelines and pgvector retrieval** — chunking, embedding generation, and HNSW-indexed semantic search over thousands of documents.
- **Secured the API with JWT refresh-token rotation and Redis rate limiting**; built the Next.js App Router client on the streaming endpoints.

Real-Time Collaboration Platform

github.com/MohdRinshadmi/ai-real-time-collaboration

Node.js • TypeScript • WebSockets • Redis Pub/Sub • Yjs (CRDT) • PostgreSQL + pgvector • Docker • React • Next.js

- **Built a stateless WebSocket fan-out server** with channel-based routing and Redis Pub/Sub, scaling horizontally without sticky sessions.
- **Implemented CRDT document sync with Yjs** for conflict-free convergence, plus presence signals and streaming LLM summarization gated by JWT/OAuth.
- **Wrote end-to-end Playwright tests** for multi-user editing, reconnection, and conflict resolution.

Education

Bachelor of Business Administration (BBA)

June 2019 – Oct 2022

SJES College of Management — Bangalore North University, Bangalore
